

Online Training ComoNeo

Seminar description

Industry 4.0 has already taken on concrete forms in injection molding production. The focus is on the consistent digitization of processes and thus increasing product quality and profitability.

With the ComoNeo process monitoring and control system, companies are optimally prepared for the increasing demands of digital networking.

The online training offers the opportunity to get to know the ComoNeo. It provides an overview of all the basic functions that are required for process monitoring so that our system can be used effectively and sensibly

Seminar content

- Dashboard overview
- Tool data management
- Create and use monitoring functions
- Process analysis Production / history
- Control functions

Goal

The participants get to know the ComoNeo process monitoring system and get an overview of useful fields of application.

Target group

Set-up technicians and machine operators, production managers, mold constructors and design engineers, quality assurance managers

Prerequisite for participation

PC with internet access, headset, webcam optional

Duration

1/2 day

Seminar number

9966B11-3-0-1-2-ON
